

NITIN TIWARI

Aspiring Full Stack Developer | Java · Spring Boot · React.js | Generative AI Integration

+91 8821826604 | nitin200409@gmail.com | [GitHub](#) | [LeetCode](#) | [GFG](#)

PROFESSIONAL SUMMARY

Aspiring Full Stack Developer with hands-on experience building complete applications end-to-end using Java, Spring Boot, React.js, and MySQL. Comfortable designing secure REST APIs, role-based authentication (Spring Security, JWT), and responsive front-ends, with practical experience integrating Generative AI (Spring AI, LLM integration, Prompt Engineering) into personal projects. Strong fundamentals in OOP and Data Structures & Algorithms, developed through multiple self-driven full-stack builds covering database design, backend logic, and frontend integration.

TECHNICAL SKILLS

Languages: Java, Python, SQL

Frontend: React.js, HTML5, CSS3, Axios

Backend: Spring, Spring Boot, Spring Security, Spring JPA, Spring MVC, Spring AOP, JDBC, Hibernate, REST APIs, Microservices, JWT

Database: MySQL

Tools & DevOps: Git/GitHub, Docker, Kafka, Maven, Postman

Generative AI: Spring AI, LLM Integration, Prompt Engineering, RAG, MCP, Embeddings, Vector Databases, Semantic Search, Tool/Function Calling, LLM Application Architecture

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating System

PROJECTS

MyDoctor — Smart Healthcare Appointment System | *React.js, Spring Boot, Spring Security, JWT, MySQL, Razorpay*

[Github](#)

- Designed and built a full-stack healthcare appointment system with **role-based access control (RBAC)** for Patient, Doctor, and Admin roles, secured end-to-end using **Spring Security + JWT authentication**.
- Developed RESTful APIs for appointment booking, doctor scheduling, and patient management, backed by **Spring Data JPA/Hibernate** with a normalized MySQL schema
- Integrated Razorpay payment gateway** for secure online appointment fee payments, handling payment initiation and verification.
- Developed a **dedicated admin panel** for full platform management — users, doctors, and appointments.
- Implemented secure, stateless authentication flow (JWT-based) supporting multiple user roles with distinct access levels — reflecting real-world hospital/clinic access patterns.

MyWallet — Expense Tracker | *Spring Boot, React.js, MySQL* [Github](#)

- Built a full-stack expense-tracking application with **multi-role authentication, sign-up/sign-in, password reset, and email verification**.
- Developed dashboards for transaction management, recurring transactions, monthly summaries, and budget tracking.
- Implemented **admin-side management** for categories, users, and transactions with search, filter, and pagination.

IntelliInterview — AI-Powered Interview Platform (ongoing) | *React.js, Spring Boot, Spring AI*

- Designed a **microservices-based platform** (Auth, Resume, Interview, Coding, Aptitude, Analytics services) consolidating **resume analysis, AI interviews, and coding/aptitude practice** into one system.
- Integrated **Google Gemini API for ATS-style resume scoring and AI interview question generation** with real-time WebSocket streaming, plus Judge0 for sandboxed code execution.
- Built a Kafka-driven Analytics service that aggregates cross-module performance data to auto-detect weak areas and generate a **personalized preparation roadmap**.
- Secured the platform with **JWT-based authentication** at the API Gateway and a database-per-service MySQL architecture.

EDUCATION

IET, Devi Ahilya Vishwavidyalaya (DAVV), Indore — Bachelor of Engineering | 2023–2027 | CGPA: 8.48

The Lovedale Sr. Sec. School (CBSE) — Class XII: 89% | Class X: 90.4%

CERTIFICATIONS & ACHIEVEMENTS

- Smart India Hackathon (SIH) two times finalist**
- Solved 400+ DSA Problems** across LeetCode and GeeksforGeeks, with all solutions implemented in Java.
- Java, Spring Framework, Spring Boot & Spring AI — Udemy, Java DSA and System Design — PW Skills
- Generative AI with LangChain and Hugging Face — Udemy
